# INTRO TO NATURAL BUILDING AND APPROPRIATE TECHNOLOGY

Climate Change Adaptation and Mitigation  
“Take your first steps to sustainability; Then to regeneration”

BDS  
\$100

**CPRI Barbados:** Walkers Reserve,  
St. Andrew.  
**9:00am - 5:00pm**

## Introduction to Natural Building and Appropriate Technology:

This course can be taken on its own or as module 8 of a 10 part 'PDC' Certificate.

Students are exposed to current and alternative building designs that utilize local, less energy intensive materials. Different natural building techniques are showcased and the pros and cons discussed. Prepare to get dirty, we will show participants how to assess their soils and how to create a construction soil mix. We will all have an opportunity to make mud bricks and if time permits do some earthen plastering. This module also teaches students about finding appropriate technology that is affordable, simple to build and maintain and durable.
